**RESPECT LANDOWNER RIGHTS**

Some lands located within the boundaries of Forests, Parks, Recreational areas, Wildlife, Game or Conservation areas may be privately owned. Also, County, State or Federal owned lands may be subject to leases or other interests held by private entities. **These privately controlled lands may or may not be open to public hunting.** Always look for posted signs, which identify lands open or closed to hunting and contact the landowner when indicated. **Please do not trespass.**

For further information contact your local Department of Natural Resources or US Fish and Wildlife Service.

This book includes the most current National Agricultural Imagery Program (NAIP) photography for each corresponding township. This public domain imagery is sourced from the USDA.

# IMPORTANT FACTS ABOUT LAND DESCRIPTIONS

## *Land Measurements, Townships, Sections, Meandered Water, Government Lots, Etc.*

## *What is a Land Description?*

A land description is a description of a tract of land in legally acceptable terms, so as to show exactly where it is located and how many acres it contains.

## Table of Land Measurements

| LINEAR MEASURE | | | | SQUARE MEASURE | | | |
|---|---|---|---|---|---|---|---|
| 1 inch | .0833 foot | 16½ feet | 1 rod | 144 sq. in. | 1 sq.ft. | 43560 sq. ft. | 1 acre |
| 7.92 inches | 1 link | 5½ yards | 1 rod | 9 sq. ft. | 1 sq. yd. | 640 acres | 1 sq. mile |
| 12 inches | 1 foot | 4 rods | 100 links | 30¼ sq. yds. | 1 sq. rod | 1 sq. mile | 1 section |
| 1 vara | 33 inches | 66 feet | 1 chain | 16 sq. rods | 1 sq. chain | 36 sq. miles | 1 township |
| 2¾ feet | 1 vara | 80 chains | 1 mile | 1 sq. rod | 272¼ sq. ft. | 6 miles sq. | 1 township |
| 3 feet | 1 yard | 320 rods | 1 mile | 1 sq. chain | 4356 sq. ft. | 208 ft. 8 in. sq. | 1 acre |
| 25 links | 16½ feet | 8000 links | 1 mile | 10 sq. chains | 1 acre | 80 rods sq. | 40 acres |
| 25 links | 1 rod | 5280 feet | 1 mile | 160 sq. rods | 1 acre | 160 rods sq. | 160 acres |
| 100 links | 1 chain | 1760 yards | 1 mile | 4840 sq. yds. | 1 acre | | |

In non-rectangular land descriptions, distance is usually described in terms of either feet or rods (this is especially true in surveying today), and square measure in terms of acres. Such descriptions are called Metes and Bounds descriptions and will be explained in detail later.

In rectangular land descriptions, square measure is again in terms of acres, and the location of the land in such terms as N½ (north one-half), SE¼ (south east one-fourth or quarter), etc. as shown in figures 2, 3, 4 and 5.

## *Meandered Water & Government Lots*

A meandered lake or stream is water, next to which the adjoining landowner pays taxes on the land only. Such land is divided into divisions of land called government lots. The location, acreage and lot number of each such a tract of land, was determined, surveyed and platted by the original government surveyors.

The original survey of your county (complete maps of each township, meandered lakes, government lots, etc.) is in your courthouse, and this original survey is the basis for all land descriptions in your county (see figure1).

**IMPORTANT:**
***THE GOVERNMENT LOT NUMBER GIVEN TO A PIECE OF LAND, IS THE LEGAL DESCRIPTION OF THAT TRACT OF LAND.***

**HOW CAN YOU TELL WHETHER WATER IS MEANDERED OR PRIVATELY OWNED?**

On our township maps, if you find government lots adjoining a body of water or stream, those waters are meandered. If there are no government lots surrounding water, that water is privately owned, the owner is paying taxes on the land under the water, and the owner controls the hunting, fishing, trapping rights, etc., on that water, within the regulations of the State and Federal laws, EXCEPT where such water is deemed navigable, other rulings may sometimes pertain.

As a generality (but not always), meandered water is public water which the public may use for recreational purposes, fishing, hunting, trapping, etc., provided that there is legal access to the water, or in other words, if the public can get to such waters without trespassing. There still is much litigation concerning the same to be decided by the courts.

## *The Best Way To Read Land Descriptions Is From The Rear Or Backwards*

Descriptions of land always read FIRST from either the North or the South. In figures 2, 3, 4 and 5, notice that they all start with N (north), S (south), such as NW, SE, etc. They are never WN (west north), ES (east south) etc. IMPORTANT: It is comparatively simple for anyone to understand a description, that is, determine where a tract of land is located, from even a long description. The SECRET is to read or analyze the description from the rear or backwards.

EXAMPLE: Under figure 4, the first description read E½, SE¼, SW¼, SW¼. The last part of the description reads SW¼, which means that the tract of land we are looking for is somewhere in that quarter (as shown in figure 2). Next back we find SW¼, which means the tract we are after is somewhere in the SW¼ SW¼ (as shown in figure 3). Next back, we find the SE¼, which means that the tract is in the SE¼ SW¼SW¼ (as shown in figure 5). Next back and our last part to look up, is the E½ of the above, which is the location of the tract described by the whole description (as shown in figure 4).

## *To Interpret A Land Description - Locate The Area On Your Township Plat, Then Analyze The Description & Follow It On The Plat Map.*

# IMPORTANT FACTS ABOUT LAND DESCRIPTIONS

## Township Survey Information

### A Congressional Township Contains 36 Sections Of Land 1 Mile Square

### A Civil Or Political Township May Be Larger Or Smaller Than A Congressional Township.

### Townships

Theoretically, a township is a square tract of land with sides of six miles each, and containing 36 sections of land. Actually this is not the case. Years ago, when the original survey of this state was made by the government engineers, they knew that it was impossible to keep a true north and south direction of township lines, and still keep getting township squares of 36 square miles. As they surveyed toward the north pole, they were constantly running out of land, because the township lines were converging toward the north pole.

DIAGRAM SHOWING HOW SECTIONS ARE NUMBERED IN A TOWNSHIP

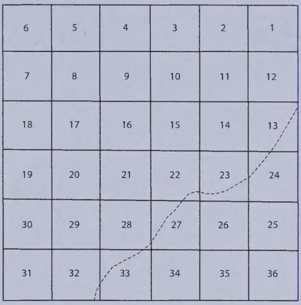

**FIGURE 6**

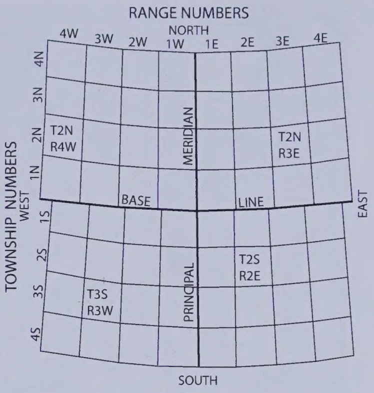

**FIGURE 7**

If you will turn to one of the township maps in this plat book, you will notice that on the north and on the west of each township, there are divisions of land which show odd acreages. In some townships, these odd acreages are called government lots (because they were given a lot number), and at other times left as FRACTIONAL FORTIES OR EIGHTIES. It was at the option of the original government surveyors as to whether they would call these odd acreages government lots, or fractional forties and eighties.

The reason for these odd acreages is that the government surveyors adjusted for shortages of land which developed as they went north, by making fractional forties, eighties or government lots out of the land on the west side of a township, and the same for the land on the north side of a township to keep east and west lines running parallel. In other words it was impossible to fit full squares into a circle.

Townships sometimes vary in size from the regularly laid-out township (see figure 6). Suppose that the dotted line in figure 6 is a river separating two counties. The land north and west of the river could be a township in one county, the land south and east could be a township in another county. Whichever county the land is in, it still retains the same section, township and range numbers for purposes of land descriptions.

Each township has a township number and also a range number (sometimes more than one of each if the township is oversized, or a combination of more than one township and range).

Government surveying of townships is run from starting lines called base lines and principal meridians. Each township has a township number. This number is the number of rows or tiers of townships that a township is either north or south of the base line. Also each township has a range number. This number is the number of rows or tiers of townships that a township is either east or west of the principal meridian (see figure 7). EVERY DESCRIPTION OF LAND SHOULD SHOW THE SECTION, TOWNSHIP AND RANGE IT IS LOCATED IN.

### Townships May Be Either North Or South Of The Base Line Ranges May Be Either East Or West Of The Principal Meridian.

## Metes And Bounds Descriptions

### And Explanation Of Direction In Terms Of Degrees

***WHAT IS A METES AND BOUNDS DESCRIPTION?*** It is a description of a tract of land by starting at a given point, running so many feet a certain direction, so many feet another direction etc., back to the point of beginning. EXAMPLE: In figure 1 notice the small tract of land outlined. The following would be a typical metes and bounds description of that tract of land. "Begin at the center of the section, thence north 660 feet, thence east 660 feet, thence south 660 feet, thence west 660 feet, back to the point of beginning, and containing 10 acres, being a part of Sec. No. etc."

**IMPORTANT:** ***To locate a tract of land from a metes and bounds description, start from the point of beginning, and follow it out (do not read it backwards as in the case of a rectangular description).***

The small tract of land just located by the above metes and bounds description could also be described as the SW¼ SW¼ NE¼ of the section. In most cases, the same tract of land may be described in different ways. The rectangular system of describing and locating land as shown in figure 2, 3, 4 and 5 is the most simple and almost always used when possible.

A circle contains 360 degrees. Explanation: If you start at the center of a circle and run 360 straight lines an equal angle apart to the edge of the circle, so as to divide the circle in 360 equal parts, THE DIFFERENCE OF DIRECTION BETWEEN EACH LINE IS ONE DEGREE.

In land descriptions, degree readings are not a measure of distance. They are combined with either North or South, to show the direction a line runs from a given point.

### How To Read Descriptions Which Show Directions In Terms of Degrees

In figure 8, the north-south line, and the east-west line divide the circle into 4 equal parts, which means that each part contains 90 degrees as shown. Several different direction lines are shown in this diagram, with the number of degrees each varies east or west from the north and south starting points (remember again that all descriptions read from the north or south).

We all know what north-west is. It is a direction which is half-way between North and West. In terms of degrees the direction north-west would read, north 45 degrees west (see figure 8).

### Example Of A Land Description In Terms Of Degrees

At this time, study figure 8 for a minute or two. In figure 8, notice the small tract. The following metes and bounds description will locate this small tract. "Begin at the beginning point, thence N 20 degrees west — 200 feet, thence N 75 degrees east — 1190 feet, thence S 30 degrees east — 240 feet, thence S 45 degrees west — 420 feet, thence west — 900 feet back to the point of beginning, containing so many acres, etc."

## Why do the maps look crooked?

Our maps are geo-referenced and stretched to fit the exact latitude and longitude coordinates on the earth. This gives our data positional accuracy. And because the earth is round, and the map is flat, when it is projected to the coordinate pairs of the section corners, the result is the way a paper map would look if you tried to fit it onto a round globe!

## Latitude and Longitude

Latitude and longitude information is a coordinate system written in degrees (°) and minutes (') and uses a grid that enables us to precisely locate a particular place or point on the earth's surface.

**Latitude lines, or parallels, run horizontally across the surface of the map and is the angular distance north or south from the equator of a particular point on the earth's surface. The degrees continue 90° north and south, with 0° being located at the equator.**

**Longitude lines, or meridians, run vertically and is the angular distance of a particular point east or west of the prime meridian at 0° located in Greenwich, England. The degrees continue 180° east and 180° west where they come together to form the International Date Line in the Pacific Ocean.**

Degrees latitude and longitude are divided into minutes and seconds for more precision in finding a particular point on the earth. There are 60 minutes in each degree and each minute is divided into 60 seconds. Rockford Map Publishers is located at 42°16'N, 89°5'W (42 degrees and 16 minutes north of the equator and 89 degrees and 5 minutes west of the meridian in Greenwich, England).

## Latitude and Longitude

Latitude and longitude information is a coordinate system written in degrees (°) and minutes (') and uses a grid that enables us to precisely locate a particular place or point on the earth's surface.

**Latitude lines, or parallels, run horizontally across the surface of the map and is the angular distance north or south from the equator of a particular point on the earth's surface. The degrees continue 90° north and south, with 0° being located at the equator.**

**Longitude lines, or meridians, run vertically and is the angular distance of a particular point east or west of the prime meridian at 0° located in Greenwich, England. The degrees continue 180° east and 180° west where they come together to form the International Date Line in the Pacific Ocean.**

Degrees latitude and longitude are divided into minutes and seconds for more precision in finding a particular point on the earth. There are 60 minutes in each degree and each minute is divided into 60 seconds. Rockford Map Publishers is located at 42°16'N, 89°5'W (42 degrees and 16 minutes north of the equator and 89 degrees and 5 minutes west of the meridian in Greenwich, England).

## Thank you advertisers.

We put a lot of effort and hard work into offering the highest quality, most accurate, and overall best plat book on the market. Publishing these maps would not be possible without the continued support of our advertisers. We encourage our readers to support the businesses that made this book available to you.

DeKalb County Soil & Water Conservation District

# "Leadership in Soil & Water Conservation"

942 W. 15th Street • Auburn, Indiana 46706
(260) 925-5620 ext. 3

NRCS Natural Resources Conservation Service

FSA FARM SERVICE AGENCY

The *District Cost Share Program* (DCSP) is available to residential properties in DeKalb county.

***Concervation Practices*** - A wide variety of practices are available to address many resource concerns.

***Rain Gardens*** - Rain gardens not only provide asthetic value, they also potentially provide environmental benefits by increasing natural water filtration, reducing runoff and enhancing wildlife habitat.

***Rain Barrels*** - By using collected rain water you decrease water consumption and cost, and reduce the volume of unfiltered runoff that flows into drains and natural waterways.

***Well Capping*** - Properly sealing an abandoned well protects the very water you use every day.

***Ash Tree Replacement*** - This program helps to offset the devastation of the *emerald ash borer beetle* by replacing a dead ash tree with a native species tree.

***Septic System Replacement*** - Financial assistance is available to help you repair or replace a failed or failing septic system.

Available to Rent!

***Tree Planter***

## Farm Bill Programs

The following programs are exclusive to agricultural farmland:

**CRP** - *Conservation Reserve Program* is designed to enhance the health of the soil, reduce erosion, improve water quality, and support wildlife by converting cropland to semi-permanent cover and habitat.

**EQIP** - *Environmental Quality Incentives Program* is in place to promote the use of conservation practices to address resource concerns and improve overall system management and profitablity.

**CSP** -*Conservation Stewardship Program* was developed to suppport producers who have already made conservation a priority in their farming systems.

**WRE** - The *Wetland Reserve Easements* (formerly WRP) program is used to permenantly restore, protect, and enhance wetlands that have been affected by crop production.

Available to Rent!

*The **Great Plains 1006 NT** no-till drill is ideal for planting everything from soy beans to warm season grasses!*

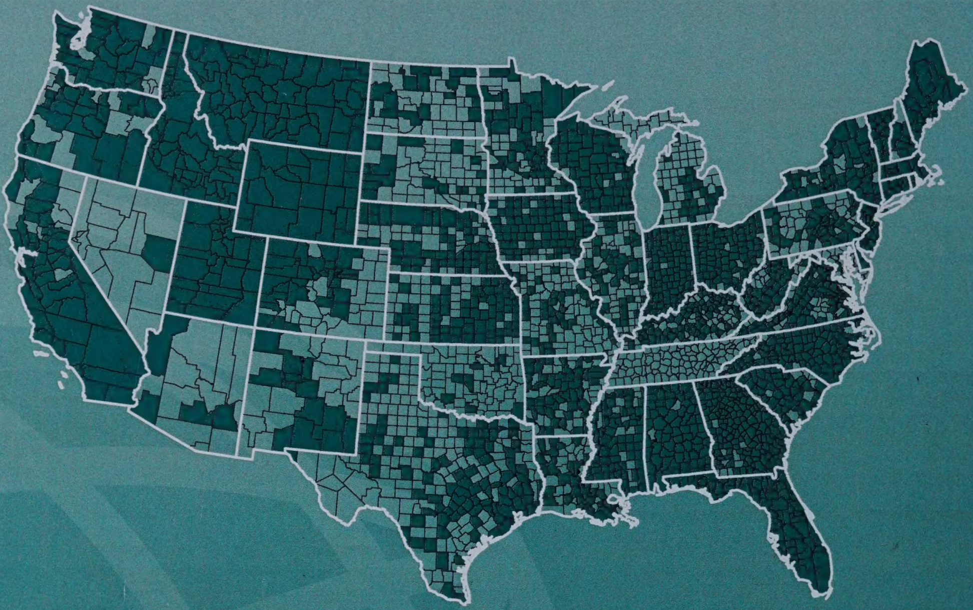
MobilePlat™

**Plat maps are now mobile.**
MobilePlat is a seamless, geo-referenced plat map (.pdf) that is designed for use on smartphones and tablets with Avenza's free PDF Maps app (iOS and Android)

**So many great features all in one place.**
View your location using GPS, search Google for locations, plot placemarks, add notes and attributes–all from your mobile iOS device.

**Save money and stop streaming data.**
All maps are stored on your device and can be used offline without using WiFi or data so you save money and stop spending your time loading maps.

ROCKFORD MAP
PUBLISHERS



**Most up-to-date parcel data available.**

GIS Files from RockfordMap.com

**Nationwide coverage.**
RockfordMap.com offers the most up-to-date parcel data available for 2,000+ counties throughout the United States in .shp and .kml formats.

**Standardized structure.**
Our fully attributed parcel polygon data contains* **PINS, Ownership Information, Addresses** and other related attributes. All data is standardized, easy-to-use structure so you can save time on cleaning up data and spend more time on what really matters.

**One payment. One purchase.**
With no annual license fees, you are just one click away from data. No hassles. Just parcel data when you need it.

Call **1-800-321-1627** or visit **rockfordmap.com/gis-file**
today for pricing and attribute verification.

*Attributes may vary by county. Most files are current within the past year.
